Error Handling

No exceptions

Errors as values

Error sets and unions

Error Handling

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}

// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

Error Handling

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}

// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

Error Handling

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}

// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

Error Handling

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}

// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

Error Handling

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}

// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

Error Handling

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}

switch (checkNull(value))
  .IsNull => doOneThing(),
  .Invalid => doAnotherThing(),
}
```

Error Handling

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}

switch (checkNull(value))
  .IsNull => doOneThing(),
  .Invalid => doAnotherThing(),
}
```

Error Handling

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}

switch (checkNull(value))
  .IsNull => doOneThing(),
  .Invalid => doAnotherThing(),
}
```

Error Handling

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}

switch (checkNull(value))
  .IsNull => doOneThing(),
  .Invalid => doAnotherThing(),
}
```

Comptime

Language

```
class Container<T>(
    var items: ArrayList<T>,
)

fn Container(comptime T: type) type {
    return struct {
        items: ArrayList(T),
    }
}
```

Comptime

Language

```
