No exceptions

Errors as values

Error sets and unions

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}
```

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

```
// inferred error set
pub fn main() !void {
    const num = try parseInt(u32, "324", 10);
}
```

```
// named error set
const IntError = error{
    IsNull,
    Invalid,
};
fn checkNull(num: usize) IntError!void {
    if (num == 0) {
        return error.IsNull;
    }
}
```

```
// inferred error set
